DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- Claims 1-27, drawn to a method of altering a shock wave in a fluid, classified in class 244, subclass 1N.
- II. Claims 28, 51, drawn to an apparatus on a body moving through a fluid for modifying a shock wave, classified in class 244, subclass 117R.
- III. Claims 29-35, 43-49, 52, drawn to a method of decreasing drag on a body, classified in class 244, subclass 130.
- IV. Claims 36, 50, drawn to a method of steering a body traveling through a fluid, classified in class 244, subclass 75R.
- V. Claims 37-42, drawn to a projectile, classified in class 102, subclass 374.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case, the apparatus of Invention II can be used as a directed-energy weapon in a method of destroying an aircraft.

Inventions III and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice

Art Unit: 3643

another and materially different process. (MPEP § 806.05(e)). In this case, the apparatus of Invention II is not limited to use in a method of decreasing drag of a body passing through a fluid, but could be used as a directed-energy weapon in a process for destroying an aircraft.

Inventions III and IV are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention IV has separate utility such as a method of causing rotation of an object, such as an impeller, by directing heated fluid against it. See MPEP § 806.05(d).

Inventions IV and V are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are not disclosed as capable of use together and have different modes of operation—the projectile does not require asymmetrical pressure changes against its surface so as to change its trajectory.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Application/Control Number: 10/705,232

Art Unit: 3643

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
